Kroll Version 10.35.4.11 Hotfix Release Notes (30/10/2026)

This document is a compilation of changes and enhancements in Kroll version 10.35.4.11 (30/10/2026) release. The purpose is to keep users informed of changes to the software and to help users implement and adapt to those changes.

KCM

[KRL-26831] Central Maintenance push fails when an appointment category is deleted but still in use on appointment types at the store

Bug

When an appointment category was deleted in Kroll Central Maintenance (KCM) but still in use by an appointment type at the store and the change was pushed to a store, the push could fail with the following error:

```
The DELETE statement conflicted with the REFERENCE constraint
'FK_CalendarAppointmentType…'.
```

Resolution

This issue has been resolved. The store update now skips any category that is still attached to any appointment types, and the rest of the update completes. The skipped category stays at the store until its types are removed.
