

## Medesync EMR

Helping you deliver specialized podiatry care to your patients.

Not all EMRs are created equal. Designed by a physician, Medesync is a web-based EMR that's bilingual, reliable and easy to use, with built-in tools to support your podiatry practice.

### **Efficiently manage prescriptions.**

Quickly search for drugs and add favourites, create templates to prescribe various medications with a single click, create prescription models that comply with podiatry regulations, and use convenient features like display of required clinical data (e.g. weight) to adjust patient dosage on the fly.

### **Monitor patient progress at a glance.**

Monitor patient progress from orthotic devices using extracted data from dynamic PDFs or personalized forms. Use the graphical representations to help make informed decisions rapidly.

### **Easily adapt patient care.**

Capture notes using a stylus, keyboard, shortcuts or voice dictation. Using the stylus, you can add notes to images uploaded from your mobile device. Use built-in, customizable podiatric templates and forms, or create your own. Forms can be auto-populated with demographic and clinical data. Create consult letters, progress notes and send/receive referrals via secure email or efax.

### **Understand your patient population.**

Leverage advanced search analytics to define patient groups, track clinical characteristics and monitor patients with identified special conditions, such as plantar fasciitis.

### **EMR access on the go.**

Remotely connect to your EMR from a mobile device with the free [TELUS EMR Mobile](#) app. Access patient and clinic information, manage labs, document symptoms and more.

## Bring your EMR to the next level.

Increase your clinic efficiency, integrate powerful EMR add-on tools and engage your patients with Medesync.

### Customize your EMR

Easily customize your patient summary and clinical notes, and create your own electronic forms.

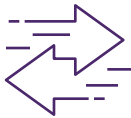

### Manage lab results easily

Examine lab and test information for a specified time period and pull lab results directly into a patient's chart for a single view.

### Connect with patients

Use the patient portal to send individual and group messages privately. Allow for online pre-visit questionnaires and appointment booking.

### Provider-to-provider communications

Exchange and store unlimited digital and eFax communications with other healthcare professionals with MedDialog.

### Virtual visits

Treat your patients remotely, access health information and update patient health records simultaneously with TELUS EMR Virtual Visit.

### Electronic prescription renewals

Process prescription renewal requests from pharmacists directly from your EMR, and automatically update information in both your EMR and the DSQ.

Taking care of your patients is your priority. Supporting you is ours.  
By working together, we can improve care delivery across the health continuum.

Turning information into better health outcomes for Canadians.
