

Medesync EMR

Supporting your specialized cardiology care.

Designed by a physician, Medesync is a web-based EMR that's bilingual, reliable, fast and easy to use with built-in tools to support the unique needs of your busy cardiology practice.

Streamline processes for cardiac care.

Use customizable, cardiology-specific templates for Framingham (risk assessment for heart disease), hypertension, cardiac exam, cardiac catheterization, pacemaker implantation and more. Receive diagnostic test results right in your EMR using HL7 messages. Share consults from your EMR with MedDialog and manage patient waitlists by priorities and criteria.

Enhance clinic note-taking.

Capture notes with the stylus, keyboard, acronyms, shortcuts and voice recognition. View a patient's summary, take notes, add pictures, prescribe and fill out forms - all on a single screen. Prescribe medications and create templates for compounds right from your notes.

Manage referrals and consult letters.

Send and receive referrals, and efficiently triage and manage them - right in your EMR. Communicate with providers outside your clinic and share encrypted patient records and consult results using MedDialog.

EMR access on the go.

Remotely connect to your EMR from a mobile device with the free [TELUS EMR Mobile app](#). Access patient and clinic information, manage labs, document symptoms and more.

Bring your EMR to the next level.

Increase your clinic efficiency, integrate powerful EMR add-on tools and engage your patients with Medesync.

Customize your EMR

Easily customize your patient summary and clinical notes and create your own electronic forms.

Manage lab results easily

Pull lab results directly into patient charts for a single view of the patient. You can also view lab and test information over a specified time period.

Stay connected with patients

Use the patient portal to securely send individual and group messages. Save time with online pre-visit questionnaires, patient bookings and automated reminders.

Provider-to-provider communications

Exchange and store unlimited digital and eFax communications with other healthcare professionals with MedDialog.

Virtual visits

Treat your patients remotely with video visits, access health information and update patient health records simultaneously from your EMR with TELUS EMR Virtual Visit.

Electronic prescription renewals

Process prescription renewal requests from pharmacists directly from your EMR, and automatically update information in both your EMR and the DSQ.

Taking care of your patients is your priority. Supporting you is ours.
By working together, we can improve care delivery across the health continuum.
