

Medesync EMR

Helping you deliver specialized care to your young patients.

Not all EMRs are created equal. Designed by a physician and optimized for paediatric workflows, Medesync is a web-based EMR that's bilingual, reliable and easy to use, with built-in tools that let you customize services to your needs.

Chart healthy growth.

Monitor your patients' growth parameters and plot percentiles with digital growth charts, detect reasons for off-the-curve results using associated comments, and accurately rank patients by percentile based on weight data, up to three decimals.

Simplify daily processes.

Use customizable paediatric templates and forms, or create your own for routine screening activities. Triage, generate, send and receive consultation letters and progress notes via secure email or efax - right from your EMR.

Stay on top of vaccines.

Access clinical reminders for upcoming vaccines for your young patients following the Protocole d'Immunisation du Québec standards. From your EMR, consult patient vaccine profiles including adverse reactions and add vaccines in your patient charts as well as the Quebec Vaccination Registry in one step.

Understand your patient population.

Leverage advanced search analytics to define patient groups, track clinical characteristics and monitor patients with identified special conditions.

EMR access on the go.

Remotely connect to your EMR from a mobile device with the free [EMR Mobile](#) app from TELUS Health. Access patient and clinic information, manage labs, document symptoms & more.

Bring your EMR to the next level.

Increase your clinic efficiency, integrate powerful EMR add-on tools and engage your patients with Medesync.

Customize your EMR

Easily customize your patient summary and clinical notes, and create your own electronic forms.

Manage lab results easily

Examine lab and test information for a specified time period and pull lab results directly into a patient's chart for a single view.

Connect with patients

Use the patient portal to send individual and group messages privately. Have parents and guardians complete and submit forms online before arriving for a child's appointment.

Provider-to-provider communications

Exchange and store unlimited digital and eFax communications with other healthcare professionals with MedDialog.

Virtual visits

Treat your patients remotely, access health information and update patient health records simultaneously with TELUS EMR Virtual Visit.

Electronic prescription renewals

Process prescription renewal requests from pharmacists directly from your EMR, and automatically update information in both your EMR and the DSQ.

Taking care of young patients is your priority. Supporting you is ours.
By working together, we can improve care delivery across the health continuum.

Turning information into better health outcomes for Canadians.
